

ComplianceQA

Evaluation Question Set — UK Food Safety Act 1990

This document contains the 21 evaluation questions used to test ComplianceQA, an agentic RAG system built over the Food Safety Act 1990 guide. Questions are grouped into three categories: in-corpus questions with grounded expected answers, out-of-corpus questions where the system should refuse to answer, and oblique questions that test retrieval resilience to informal phrasing.

In-corpus (12 questions)

Q01

What actually counts as "food" under the Act, does it include things like drinks or chewing gum?

REFERENCE ANSWER

As defined on Page 9 of the guide, 'food', or 'foodstuff' means, 'any substance or product, whether processed, partially processed or unprocessed, intended to be, or reasonably expected to be ingested by humans.' Yes, this includes drinks and chewing gum; also any substance (including water) that's intentionally incorporated into the food during its manufacture, preparation or treatment. Drinking water also counts, but only after the point of compliance (e.g. when it comes out of the tap) (Page 9, para 20).

'Food' does not include the following: animal feed; live animals unless they are prepared for placing on the market for human consumption (e.g. oysters); plants prior to harvesting; medicinal products; cosmetics; tobacco and tobacco products; narcotic or psychotropic substances; residues and contaminants (Page 9, para 21).

Q02

I run a small farm and sell vegetables directly at a farmers' market, does the Food Safety Act apply to me?

REFERENCE ANSWER

Yes, the Food Safety Act likely applies to you. The majority of farmers are considered to be running food businesses; the Act defines a food business as 'any business in the course of which commercial operations with respect to food or food sources are carried out' (Page 10, para 24).

How much of the Act applies to you depends on the operation of the business; all farms are subject to the improvement and closure procedures outlined in paragraphs 79-82. If you sell directly to consumers, you are also subject to the provisions relating to the sale of food (Page 10, para 24).

Q03

What does the Act actually require my food business to do, in plain terms?

REFERENCE ANSWER

Your main responsibilities under the Act are: to ensure you do not include anything in food, remove anything from food, or treat food in any way that would damage the health of people eating it; to ensure that the food you serve or sell is of the nature, substance or quality that consumers would expect; and to ensure that the food is labelled, advertised and presented in a way that is not false or misleading (Page 7, paras 11-12).

Q04

If I add something to a food product that turns out to harm customers, what offence have I committed?

REFERENCE ANSWER

If you make ('render') food that causes harm to customers, you would have committed the offence of rendering food injurious to health under section 7 of the Act (Page 11, para 28). This covers adding or using a harmful substance, removing a necessary constituent, or any other treatment that makes the food injurious (Page 11, para 30). The offence applies whether the act was deliberate or not, subject to the due diligence defence (Page 11-12, para 31).

Q05

Is it actually illegal to sell food that's a different thing from what's on the label, like fish substitution?

REFERENCE ANSWER

Yes; if you sell food under a false label (such as selling haddock as cod), you are committing an offence under section 14 of the Act. If the purchaser buys an item that is not of the 'nature, substance or quality' demanded, an offence has been committed (Page 12, para 33). The term 'purchaser' can range from a customer in a shop to one company buying from another; it even includes scenarios where no money is involved (for example, winning a raffle) (Page 12, para 33).

There tends to be overlap between those three terms (nature, substance and quality); critically, the offence only applies when the purchaser is 'prejudiced' to what they're buying, which means the mis-sold item is detrimental to them (Page 12, para 34).

Q06

What is the due diligence defence and how do I actually use it?

REFERENCE ANSWER

The due diligence defence is one of the defences to the core offences in the Food Safety Act. It is designed to balance the protection of the consumer against defective food with the trader's right not to be convicted of an offence they have taken all reasonable care to avoid committing (Page 14, paras 44-45).

If you are charged with an offence but can prove that you 'took all reasonable precautions and exercised all due diligence to avoid the commission of the offence', the defence is available to you. The burden of proof lies with you, but you do not need to establish your case beyond all reasonable doubt; you only need to convince the court that you exercised due diligence on the balance of probabilities (Page 14, para 46). The courts will consider all facts in each case and will decide what 'reasonable care' should include. For example, a small business might not be required to undertake the same precautions as one of the major retailers (Page 14, para 47).

Part of the defence may also be to show that someone else was at fault; if this is claimed, you must provide sufficient information to identify who was responsible (Page 14, para 48).

Q07

I sell branded products from other manufacturers, what does due diligence look like for me versus a retailer selling their own-brand goods?

REFERENCE ANSWER

Both retailers can use the due diligence defence, but the requirements differ. In both cases you must show the offence was someone else's fault (and that person wasn't under your control as an employee would

be), or that you relied on information they supplied (Page 14-15, paras 50-51).

The difference: a retailer selling own-label products must also prove they made reasonable checks on the food (or reasonably relied on supplier checks) and had no reason to suspect they were committing an offence (Page 14-15, para 50). A retailer selling branded goods (you) need only show you could not reasonably have been expected to know an offence was being committed, and crucially, you are not required to have carried out reasonable checks of the food supplied to you (Page 15, para 51).

Q08

Who actually shows up to my business to enforce food law, and what's the difference between them?

REFERENCE ANSWER

In general, there are two main departments within local authorities responsible for enforcing food law: Trading Standards and Environmental Health (Page 16, para 55). Both are overseen by the Food Standards Agency, which advises on enforcement primarily by issuing the statutory Food Law Codes of Practice (there are separate codes for England, Scotland, Wales and Northern Ireland) (Page 16, para 54).

Trading Standards officers are principally responsible for making sure food is accurately labelled, that it contains legal ingredients, and that any claims made are truthful. They also act on national food safety alerts and issue press releases to inform local businesses and consumers about product recalls (Page 16, para 56).

Environmental Health practitioners are principally responsible for hygiene, food contamination cases, and any potentially unsafe foods. Like Trading Standards, they also act on national food safety alerts and issue press releases about product recalls (Page 16, para 57).

Q09

Can an inspector come into my business without notice, and what are they allowed to do once they're there?

REFERENCE ANSWER

Officers have the right to enter any premises unannounced within their authority's area. In some cases, they may also have the power to enter premises anywhere in the country, though in practice this is only used when following up on offences that have happened in their own area (Page 17, para 65).

Once on premises, officers are authorised to inspect premises, processes and records, and may seize or copy any relevant records and take samples of food for analysis or examination. They can also take their own visual records, such as photographs and videos. If entry is refused, they can apply to a JP or Sheriff for a warrant authorising entry (Page 17, para 66).

The definition of 'premises' is broad. It includes the obvious buildings where food is prepared, stored or sold (food processing plants, supermarkets, restaurants), as well as farms, vehicles used for transporting or delivering food, ships, aircraft, road-side and market stalls, and even private dwellings if used by food businesses (Page 17, para 67).

Officers must carry evidence of their identity. They can enter at any reasonable hour, but must give at least 24 hours' notice of their intention to enter houses used only as private dwellings (Page 18, para 70).

Q10

If inspectors think there's something wrong with my food, what can they actually do, take it away, shut me down, what?

REFERENCE ANSWER

If an authorised officer suspects there is something wrong with your food, they are allowed to detain the product and issue you with a notice requiring the food to be kept in a specific place and not to be used for human consumption while they investigate. They have up to 21 days to carry out their investigations; if they conclude the food is not unsafe, they must withdraw their notice and restore the food to you. If they do deem it unsafe, they must seize the food and put it to a JP or Sheriff (Page 17-18, paras 73-74).

If they don't feel it's necessary to investigate, they can also seize the suspect food directly. When food is seized, written notification (a Detention of Food Notice) should be issued as soon as is reasonably practicable, including details of the type and quantity of the food seized and any distinguishing marks, codes, or dates. If evidence suggests that detained food may be released, a Withdrawal of Detention of Food Notice should be served. A Food Condemnation Notification should be given to the person in charge of the food warning them that the officer intends to have it dealt with by a JP or Sheriff (Page 18-19, para 74).

When food has been seized and a hearing takes place, the person who may later face criminal proceedings can make representations and call witnesses (Page 19, para 75). If a JP or Sheriff decides the food is unsafe, they must order it to be destroyed or otherwise disposed of, with the owner ordered to meet the expenses incurred (Page 19, para 76). If detained or seized food is not eventually condemned but has deteriorated due to the time that has passed, the owner is entitled to compensation equal to the food's loss in value; disputes go to arbitration (Page 19, para 77).

Beyond actions against specific food, officers can also use improvement notices (requiring you to take specific measures) and prohibition orders (prohibiting processes, treatments, premises, or equipment), though in most cases these are now issued under the Food Hygiene Regulations 2006 (Page 19, para 78). In cases of imminent risk to health, an emergency prohibition notice can be served and an emergency prohibition order can close part or all of a food business (Page 19-20, paras 79-80).

Q11

If I get an improvement notice or have my business closed, can I appeal it?

REFERENCE ANSWER

Yes, anyone running a food business can appeal certain enforcement actions to a Magistrates' court (or in Scotland, to the Sheriff).

The right of appeal applies where an authority refuses to issue a certificate lifting an emergency prohibition order, or where they close a business by refusing, cancelling, suspending, or revoking registration. Appeals can also be brought against improvement notices in limited circumstances (Page 21, para 87 and footnote 13).

When you have a right of appeal, the written notice will state it and the timeframe (normally one month) (Page 21, para 88). If unhappy with the Magistrates' court decision, you can appeal further to the Crown Court (or in Scotland, the Sheriff Principal or the Court of Session) (Page 21, para 89).

Q12

What's the maximum a court could fine me or send me to prison for under this Act?

REFERENCE ANSWER

Penalties depend on the court and the offence. The Crown Court can imprison offenders for up to two years and/or impose unlimited fines for offences in England and Wales (other than obstruction-related ones) (Page 13, para 39).

Magistrates' courts can fine up to £5,000 per offence and/or impose up to six months' imprisonment (Page 13, para 40). For offences under sections 7 and 14 specifically, the magistrates' maximum fine rises to £20,000 (Page 13, para 41).

In Scotland, the Sheriff court can impose up to 12 months' imprisonment and a statutory maximum fine of £10,000 (Page 13, para 42). Regulations made under the Act may set their own levels of penalties, not exceeding the above (Page 13, para 43).

Oblique phrasing (3 questions)

Q19

If someone else messed up and I'm getting blamed, is there any way out?

REFERENCE ANSWER

Yes, there are defences available to you under the Food Safety Act. The principal one is the due diligence defence, which is available where you can prove that you 'took all reasonable precautions and exercised all due diligence to avoid the commission of the offence' (Page 14, paras 44-46).

Part of this defence may be to show that someone else was at fault. If you claim this, you must give the prosecution information that enables them to identify who was responsible for the offence. This must be done seven days before the hearing, or within one month of your first court appearance (Page 14, para 48).

There is also a separate, more general defence: where the commission of an offence was due to the act or default of another person, that defence is specified by the Act (Page 15, para 52).

Note: Targets due diligence + act-of-another defences (paras 48, 52). Tests retrieval resilience to colloquial phrasing.

Q20

What can I do if a council officer is being unreasonable and I want to push back?

REFERENCE ANSWER

There are limits on what authorised officers can do, and you have rights of appeal against certain enforcement decisions.

Officers must carry evidence of their identity, can enter premises only at reasonable hours, and must give at least 24 hours' notice before entering a private dwelling. They also commit an offence if they disclose commercially sensitive information learnt during an official visit, except in the proper course of their duties (Page 18, paras 70-71).

If you disagree with an enforcement decision, anyone running a food business can appeal to a Magistrates' court (or, in Scotland, to the Sheriff) where an authority refuses to issue a certificate lifting an emergency prohibition order, or where they close a business by refusing, cancelling, suspending, or revoking registration. Appeals can also be brought against improvement notices in limited circumstances. Written notice of the decision will state the appeal right and the timeframe (normally one month). Further appeals can be made to the Crown Court (Page 21, paras 87-89).

Note: Targets appeals procedure (paras 87-89) and limits on authorised officers (paras 68-70). Blends two topics.

Q21

A whole batch of my product is already out there and I've realised it's bad, what's supposed to happen now?

REFERENCE ANSWER

Where unsafe food has already been distributed, there are control measures designed to remove it from the market. The Act gives the Government powers to make emergency control orders to remove substantial threats to public health, including the prevention of distribution and sale of contaminated food. Many firms would take such steps voluntarily (Page 20, paras 83-84).

The Food Standards Agency may also issue Food Alerts, which inform other local authorities and consumers about specific problems with food. A 'Food Alert for Information' advises that a product has been withdrawn or recalled and that no further action is required by authorities. A 'Food Alert for Action' is issued where it is necessary to remove a food product from the market rapidly because it may pose an imminent risk to health; specific actions are communicated in the alert. Food Alerts are issued under the Rapid Alert System for Food and Feed set down in Regulation (EC) 178/2002 (Page 20, paras 85-86).

The General Food Regulations 2004 (implementing Regulation (EC) 178/2002) also created laws on traceability, withdrawal and recall of unsafe food, which the guide references but does not detail (Page 6, para 8).

Note: Targets emergency control orders, food alerts, withdrawal/recall (paras 83-86). Tests synthesis across emergency procedures.
